

WORKSHOP:

Paddock native revegetation

Register for a free workshop and tour to learn how native vegetation can protect your livestock, improve soil health and support the sustainability of your farm.

Native vegetation provides environmental, economic and social benefits to your property. It keeps erosion and salinity in check, helps to filter water, provides wind and sun protection for stock and is essential habitat for our wildlife.

Join us for a morning with local native vegetation expert **Anne Brown** who will explain how you can improve the health and coverage of native plants on your property. You'll learn about:

- When and where to plant
- Species selection
- Seed harvesting and seeding methods
- Tubestock versus direct seeding
- Fencing and plant guarding

After the workshop, we'll take a **tour** of revegetated sites to learn firsthand from locals who are working on paddock revegetation.

Attendees will receive a **complimentary** box of locally grown, mixed natives and saltbush tube stock, which will be ready for delivery at the end of March, 2023.

When: Thursday, 9 February 2023, 9am-1pm

Where: 428 Appila-Laura Road, Appila

Lunch will be provided.
